

Rat Monoclonal anti Mouse Rae-1 (Pan-Specific)

ORDERING INFORMATION

Catalog No:	mAP-0511
Size:	100µg
Storage:	<-20°C
Immunogen:	Recombinant Mouse Rae-1delta
Ig Type:	Rat IgG2
Clone:	RM0511-14R4
Applications:	FC

Preparation: This antibody was produced from a hybridoma (mouse myeloma fused with spleen cells from a rat immunized with recombinant mouse Rae-1 delta. Rae1alpha, beta, gamma, delta and epsilon comprise a family of closely related (88-95% amino acid identity) GPI-linked cell surface proteins that function as ligands for mouse NKG2D, an activating receptor expressed on NK and T cells.

Formulation and Storage: The IgG fraction of culture supernatant was purified by Protein G affinity chromatography and lyophilized from a 0.2 µm filtered solution in phosphate-buffered saline (PBS). Lyophilized samples are stable for 2 years from date of receipt when stored at -70°C.

Reconstitution: Reconstitute the antibody with 500ul sterile PBS and the final concentration is 200ug/ml. Reconstituted antibody can also be aliquoted and stored frozen at <-20 for at least for six months without detectable loss of activity. **Avoid repeated freeze-thaw cycles.**

Specificity: This antibody recognizes mouse Rae-1 alpha, beta, gamma, delta, and epsilon by ELISAs.

Applications:

1.	FC	Yes
----	----	-----

Final dilutions should be optimized by the end users and the dilutions provided in the data sheet are for reference only.
