Catalogue Number	sAP-0451
Target Molecule	Name: ESR1 Aliases: ER; ESR; Era; ESRA; NR3A1; DKFZp686N23123; ESR1 MW: 66kDa Entrez Gene ID: 2099
Description	This gene encodes an estrogen receptor, a ligand-activated transcription factor composed of several domains important for hormone binding, DNA binding, and activation of transcription. The protein localizes to the nucleus where it may form a homodimer or a heterodimer with estrogen receptor 2. Estrogen and its receptors are essential for sexual development and reproductive function, but also play a role in other tissues such as bone. Estrogen receptors are also involved in pathological processes including breast cancer, endometrial cancer, and osteoporosis.
