

Mouse Monoclonal Antibody to PCNA

Catalogue Number	sAP-0953
Target Molecule	Name: PCNA Aliases: MW: 28.7kDa Entrez Gene ID: 5111
Description	The protein encoded by this gene is found in the nucleus and is a cofactor of DNA polymerase delta. The encoded protein acts as a homotrimer and helps increase the processivity of leading strand synthesis during DNA replication. In response to DNA damage, this protein is ubiquitinated and is involved in the RAD6-dependent DNA repair pathway. Two transcript variants encoding the same protein have been found for this gene. Pseudogenes of this gene have been described on chromosome 4 and on the X chromosome. ; ;
