

## Mouse Monoclonal Antibody to SIRT6

<b>Target Molecule</b>	<b>Name:</b> SIRT6 <b>Aliases:</b> SIR2L6 <b>MW:</b> 39kDa <b>Entrez Gene ID:</b> 51548
<b>Description</b>	This gene encodes a member of the sirtuin family of proteins, homologs to the yeast Sir2 protein. Members of the sirtuin family are characterized by a sirtuin core domain and grouped into four classes. The functions of human sirtuins have not yet been determined; however, yeast sirtuin proteins are known to regulate epigenetic gene silencing and suppress recombination of rDNA. Studies suggest that the human sirtuins may function as intracellular regulatory proteins with mono-ADP-ribosyltransferase activity. The protein encoded by this gene is included in class IV of the sirtuin family. Alternative splicing results in multiple transcript variants.;
