

Mouse Monoclonal Antibody to ATP2A1

Catalogue Number	sAP-1542
Target Molecule	Name: ATP2A1 Aliases: ATP2A; SERCA1 MW: 110kDa Entrez Gene ID: 487
Description	This gene encodes one of the SERCA Ca(2+)-ATPases, which are intracellular pumps located in the sarcoplasmic or endoplasmic reticula of muscle cells. This enzyme catalyzes the hydrolysis of ATP coupled with the translocation of calcium from the cytosol to the sarcoplasmic reticulum lumen, and is involved in muscular excitation and contraction. Mutations in this gene cause some autosomal recessive forms of Brody disease, characterized by increasing impairment of muscular relaxation during exercise. Alternative splicing results in three transcript variants encoding different isoforms.
